

The logo for NIX PLATFORM. The word "NIX" is in a dark blue, sans-serif font. The letter "X" is stylized, composed of two overlapping diagonal bars that transition from dark blue to light blue. Below "NIX" is the word "PLATFORM" in a dark blue, sans-serif font.

**NIX**  
**PLATFORM**

**Off-Chain  
Governance**

February 25, 2019

## Purpose

The purpose for an off-chain governance model is to put the power of NIX's future into the hands of the NIX community and investors. This governance model will favor those who put their investment and time into helping secure the NIX network via staking/Ghostnodes.

## Layout

### 1. Vote Weight

- Each address is its own identity.
- The amount of successful Coinstakes (block rewards from staking or managing and running a Ghostnode) that an address receives corresponds to the vote weight it has in an upcoming proposal.
  - Ex. User 1 is running a Ghostnode and earns 16 NIX a day from new blocks, this user now has 16 eligible votes to cast for a specific proposal. User 2 is staking nix and earns 4.5 NIX a day from newly generated blocks, this user now has 4.5 eligible votes to cast for a specific proposal
- The NIX development funding will be put into a transparent address that will be used to fund proposals.

### 2. Proposal Timeframes

- Two timeframes:
  - Start date and end date for proposal voting
  - Start date for vote weight eligibility i.e. Any vote weight that was created after date X is eligible for the current proposal vote.

### **3. Architecture & Flexibility**

- Off chain governance allows for multiple proposal foundations to be made (development, marketing, community etc.).
- Vote weight is created by solved blocks which can be confirmed by the blockchain and any user.
- Ownership of the vote weight for a proposal will consist of 3 steps:
  - Downloading a dApp that connects to the nix core wallet.
  - Signing a message with your private keys for each proposal.
  - Broadcasting the vote(s) to the proposal system.
- Proposal messages consist of the block hash which the proposal was created with, and timestamp of the proposal ensuring originality.
- A successful proposal will need at least a 75% in favor for with at least 50% of the eligible votes to be casted.
- Proposals can require funding, or propose changes to how NIX operates.

### **4. Application Environment (Proposal System)**

- The application to create proposals will be web based and open sourced.
- The application will run off a centralized server, however, it will mainly be used to store different proposals and proposal votes.
- All votes casted will be transparently posted with the address, signature, and message signed to ensure transparency for users to verify.
- Votes cannot be forged or duplicated as the transparency of the votes and the nix blockchain prevents that.

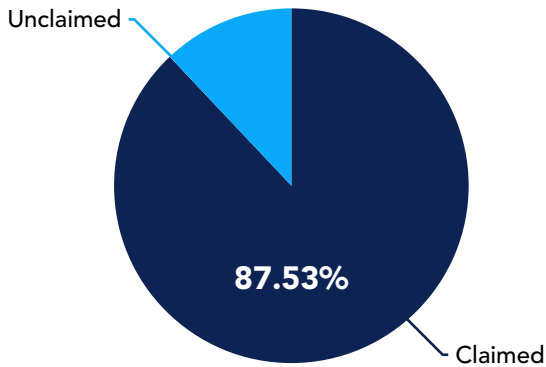

### **Conclusion**

Creating an off-chain governance model allows for a light-weight method of governance by ensuring that users who secure the network have a say in the direction NIX takes. This system prevents unnecessary blockchain data storage and is justly as transparent and powerful.

## NIX Faucet Breakdown

### % Claimed

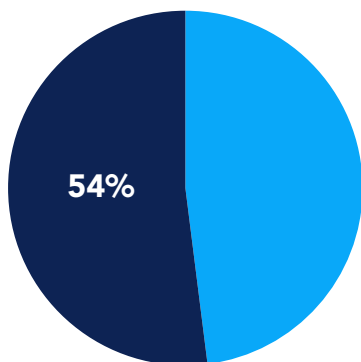

### Summary

Claimed	31,510,000.00	Dev Fee	2,000,000.00
Unclaimed	4,490,000.00	Total Initial Supply	38,000,000.00

## NIX Development Funding Breakdown 3/18 - 3/19

### % Remaining

### Summary

Starting NIX	6,490,000.00	Development Tax	378,468.00
Spent NIX	3,378,333.00	Remaining NIX	3,490,135.00
